SFIC-2026

CNG STATION DODO MODEL

GUJARAT LOCATIONS EDITION — DETAILED REFERENCE

Reformatted from the supplied eight-page reference: “Information on CNG Station Dealer Owned Dealer Operated (DODO)-Model”, issued 9 July 2019.

IMPORTANT SOURCE NOTICE

This is a research adaptation for the SFIC-2026 CNG Network Intelligence project. It is not an official SFIC-2026 policy, tender, dealership offer, or endorsement. The source document is dated 9 July 2019; eligibility criteria, fees, locations, commercial terms and operating arrangements must be reconfirmed with the relevant authorized entity before use.

Editing instructions applied

- All major sections and detailed responsibility items from the source have been retained in a readable, multi-page layout.
- Only the location list has been filtered to Gujarat entries; non-Gujarat locations such as Rajasthan have been excluded.
- Adani branding and the diagonal watermark are not reproduced in this reformatted edition.
- The original source date and attribution are retained so the information is not mistaken for newly issued policy.

Document structure

Page 2 — Brief profile and DODO models
Page 3 — Gujarat locations only
Page 4 — Land requirements, lease and eligibility
Page 5 — Dealer/company responsibility matrix (design, permissions, construction, equipment)
Page 6 — Responsibility matrix continued (utilities, training, insurance) and selection process
Page 7 — Historical application terms and fees
Page 8 — Full source limitations and project-use notes

1. Brief profile

The source describes the company as a City Gas Distribution (CGD) operator active in districts of Gujarat, Haryana and Uttar Pradesh. It states that, at the time of the document, the company operated 82 CNG (Compressed Natural Gas) stations and had laid a natural gas pipeline network of more than 6,500 km to supply Piped Natural Gas (PNG) to more than 1,300 industrial, 2,500 commercial and 375,000 domestic/residential customers.

The source further states that the company had won 15 new geographical areas in FY 2018–19 across Gujarat, Rajasthan, Madhya Pradesh, Uttar Pradesh, Chhattisgarh, Haryana, Tamil Nadu, Karnataka and Odisha. These figures are reproduced as historical statements from the source and are not verified current company figures.

To promote CNG for passenger vehicles, commercial vehicles and public transport, the source says the company intended to set up CNG stations in new and existing authorized geographical areas through the Dealer Owned Dealer Operated (DODO) model. It invited applications from individuals and partnership firms with strong financial backgrounds and land, preferably non-agricultural (NA).

2. DODO models

The source lists three investment structures:

1. DODO with investment in equipment and infrastructure.
2. DODO with investment in equipment (only dispenser) and infrastructure.
3. DODO with investment in infrastructure only (excluding equipment).

The source says separate trade margins (■/kg) would be offered for the models, but the supplied document does not specify the actual margin values. Therefore, no margin figure is inferred in this brief.

Equipment definition used in the source

“Equipment” includes the CNG compressor, storage cascade, dispenser and related tubing, piping and SCADA. The responsibility allocation for these items varies by DODO model and is summarized in the responsibility matrix on pages 5–6.

Interpretation note

DODO model descriptions below are summaries of the 2019 source. They are not current offers or confirmation that any specific model is presently available in Gujarat.

3. Gujarat locations for which applications were sought

The table below retains all Gujarat entries from the location section of the 9 July 2019 source. These are historical candidate-location references only; they do not confirm current site availability, authorization boundaries, or an active application window.

#	State	Geographical area / district	Locations stated in source
1	Gujarat	Surendranagar (areas except authorized)	1. Near Sara 2. Halvad–Chotila Highway 3. Halvad–Maliya Highway 4. Muli–Chotila Highway 5. Dhangadhra–Halvad Highway 6. Dasada–Malwan Highway
2	Gujarat	Kheda	1. Dakor–Umreth Road 2. Balasinor (within 1–2 km of a National Highway) 3. Kapadvanj 4. Lunawada
3	Gujarat	Navsari (areas except authorized) & Dang	1. Vansda 2. Vyara Highway 3. Mahuva–Anawal Road (SH-165) 4. Songadh–Uchhal Road 5. Vyara Toll Tax–Songadh (NH-53)
4	Gujarat	Ahmedabad City	1. Bakrol Circle 2. Near Shantipur Circle 3. Bhadaj–Ognaj Circle 4. Vaishnodevi Circle Road 5. Sardar Nagar–Shahibaug Road 6. Aslali Circle–Hathijan Road 7. Near Ramol Circle 8. S.P. Ring Road 9. Kuha–Kathlal Road 10. Naroda–Dehgam Road (Aenasan / Narol–Naroda Road) 11. S.G. Highway 12. Any other location in Ahmedabad City

Scope check

The Rajasthan entries shown in the original source have been excluded. No additional location has been added or represented as currently available.

4. Land requirements and lease

The source lists the following preferred land/site conditions for a CNG station:

a) Land located on a National Highway, State Highway or major city road.
b) Minimum plot size of approximately 1,200 sq. metres (preferred).
c) Minimum frontage of 40 metres.
d) Non-agricultural commercial or industrial plot with clear title.
e) Preferably no trees.
f) No overhead power/telephone lines and no underground oil/gas pipeline.
g) Electricity and water availability.
h) Access to road divider/service lane and drainage facility.

Additional land and infrastructure conditions

• Fees related to NA/NOC/zoning regulations required for setting up the CNG station are stated to be borne by the applicant.
• The applicant is to construct, develop and install infrastructure on the land according to the source company's scope and guidelines through competent manpower.
• The source states that land with infrastructure, including equipment wherever applicable, would be leased for a long-term period of not less than 15 years.

5. Eligibility for application

For individuals — criteria stated in the source

• Nationality: Indian national.
• Age: not less than 21 years in completed years as of the application date.
• Educational qualification: adequate to understand the complexity of the CNG business; 12th pass preferred.
• Social conduct: good social conduct with no criminal records.
• Financial strength: the source specifies a minimum of ■50 lakh. Evidence listed includes a bank solvency certificate, income-tax returns for the last three years, and statements of movable and immovable property.
• Experience: landowners with experience in petroleum-product retail forecourt management or the oil and gas sector are to be given priority.

For partnership firms

The source states that all partners should fulfil the eligibility criteria above. For nationality and age, any one partner may fulfil the criteria; consent is required to be signed by all partners.

All eligibility items above are reproduced from the 2019 source and must be checked against current requirements before use.

6. Primary scope of dealer / company — responsibility matrix

The source uses “AGL” for the company and “Dealer” for the applicant/dealership. The matrix below preserves the allocation shown in the supplied source, using “Company” for readability. The executed agreement and any equipment-specific exceptions would govern.

Work item	Model 1 Equipment + infrastructure	Model 2 Dispenser + infrastructure	Model 3 Infrastructure only
PESO licence and fees	Company	Company	Company
Station design and layout: sales office, compressor area, electrical room, forecourt, canopy, signage and monolith	Company	Company	Company
Equipment specifications and quantities, subject to mutually agreed demand estimates	Company	Company	Company
Statutory permissions and approvals (municipal, fire service, DM, NHAI, building proposal, factory, environment, development authority, CFO, PCB, health/safety, traffic police, health licence, weights and measures, etc.)	Dealer	Dealer	Dealer
Construction: appoint competent manpower, engineers and contractors; structural, civil, electrical and mechanical works	Dealer	Dealer	Dealer

Construction scope described in the source

The dealer's construction scope includes structural, civil, electrical and mechanical works, such as building foundations, canopy, compressor foundations, electrical rooms, trenches, driveway, boundary wall, sales room, signage, monolith, entry/exit signs, hoardings and lighting. The dealer is to appoint competent manpower, engineers and contractors.

The company is responsible for station design/layout and specifications, including the quantity of equipment to be installed, subject to demand estimates mutually agreed between the dealer and the company.

6. Primary scope of dealer / company — continued

Work item	Model 1 Equipment + infrastructure	Model 2 Dispenser + infrastructure	Model 3 Infrastructure only
Power connection as per estimated load advised by company	Dealer	Dealer	Company
Compressor, storage cascade and related equipment — installation, operation and maintenance	Dealer	Company	Company
Dispenser	Dealer	Dealer	Company (excluding operations)
All other equipment outside the defined compressor/cascade/dispenser group	Dealer	Dealer	Dealer
Electricity charges	Dealer	Dealer (excluding compressor area)	Dealer (excluding compressor area)
Weights & measures of dispensers, in presence of company representative	Dealer	Dealer	Company
HSE training for dealer manpower	Company	Company	Company
O&M; training on dispenser, compressor, storage cascade and related equipment	Dealer through OEMs	Dealer through OEMs (dispenser only)	Company
Insurance for equipment, infrastructure, manpower, cash and third-party damages	Dealer	Dealer (except equipment but including dispenser)	Dealer (except equipment)

7. Selection of applicant for dealership

The source describes the following sequence:

1. Submit an Expression of Interest (EOI) / application form with supporting documents related to the individual/partnership and the land offered, in the prescribed format required by the company.
2. Submit a business proposal for the location, including estimated CNG demand for the next five years.
3. The company assesses technical feasibility and business potential of the site.
4. A company panel interviews shortlisted applicants.
5. After management approval of candidates interviewed, the applicable land/equipment lease agreement is completed, followed by issuance of a Letter of Intent (LOI) for the dealership.

8. Important information / historical terms and conditions

The following points are reproduced from the 9 July 2019 source. These historical fees and terms must not be treated as current prices, active offers or current eligibility rules.

1. Preliminary details were to be submitted on the source company's website using the CNG Dealership Enquiry link, along with a non-refundable application fee of ■2,000 paid online. A detailed application form would be sent by email to applicants found suitable.
2. An applicant applying for more than one location was required by the source to submit a separate detailed application form and fee per location, with supporting documents.
3. For a partnership firm, the source says the application fee is paid per partnership firm (■2,000), while each partner submits a separate detailed application form and required documents.
4. Incomplete applications, applications containing willfully incorrect information, or applications submitted without the stated application fee may be rejected outright.

5. The source states a non-refundable administrative fee of ■7 lakh per selected location, payable before issuance of the LOI.
6. The selected applicant was to pay a refundable, non-interest-bearing fixed security deposit of ■10 lakh within seven days of the LOI date.
7. The company reserved the right to accept or reject any or all applications without prior notice or assigning a reason.
8. The EOI/application was intended to collect preliminary information and was not an offer capable of acceptance. Submission did not guarantee award of a CNG station dealership.
9. Further revisions, amendments or time extensions were to be communicated on the company website.
10. The document states that its points are not an exhaustive summary of all terms; the actual relationship is governed by the LOI and contract to be executed between the parties.

Historical fee summary

Fee / deposit	Amount stated in 2019 source	Source description
Application fee	■2,000	Non-refundable; online payment stated
Administrative fee	■7,00,000 per selected location	Non-refundable; before LOI issuance
Fixed security deposit	■10,00,000	Refundable, non-interest-bearing; within 7 days of LOI issuance

9. Relevance to SFIC-2026 CNG Network Intelligence

This historical reference can support qualitative site-screening attributes for the CNG network expansion project. It lists candidate areas and describes preferred land/site conditions, including highway or major-city-road access, plot size, frontage, land-use type, clear title, utilities and drainage/access.

What this document does not provide

- Verified current station coordinates.
- Station-wise daily or hourly CNG sales/throughput.
- Verified current dispensing capacity by station.
- Current traffic counts, queue lengths or vehicle-flow data.
- Confirmation that a location listed in 2019 remains available or is not already authorized.
- Current trade margins, dealership fees, eligibility rules or live application status.

Recommended data treatment in the hackathon project

1. Store the location list as historical candidate-location references with source_year = 2019.
2. Do not label the historical list as a current expansion shortlist without verification.
3. Treat the land requirements as reference criteria, not verified attributes of each specific parcel.
4. Do not infer station-level demand from this document; use separate sales/throughput sources where available.
5. Keep missing values blank and retain source/provenance fields.
6. If assumptions are used in a demo simulator, label them as assumptions rather than observed facts.

Source and attribution

Reformatted from the user-supplied “Information on CNG Station Dealer Owned Dealer Operated (DODO)-Model,” issued 9 July 2019. All Gujarat location entries have been retained; non-Gujarat location entries have been excluded. Adani branding and the diagonal watermark are not reproduced. This document is an independently reformatted research brief and is not an official SFIC-2026 policy or endorsement.

Final reminder

Because the source is historical, confirm all current commercial, regulatory, licensing, land and dealership details directly with the relevant authorized entity before relying on them for real-world decisions.
